Gard An Innovative Platform for Machine Safety

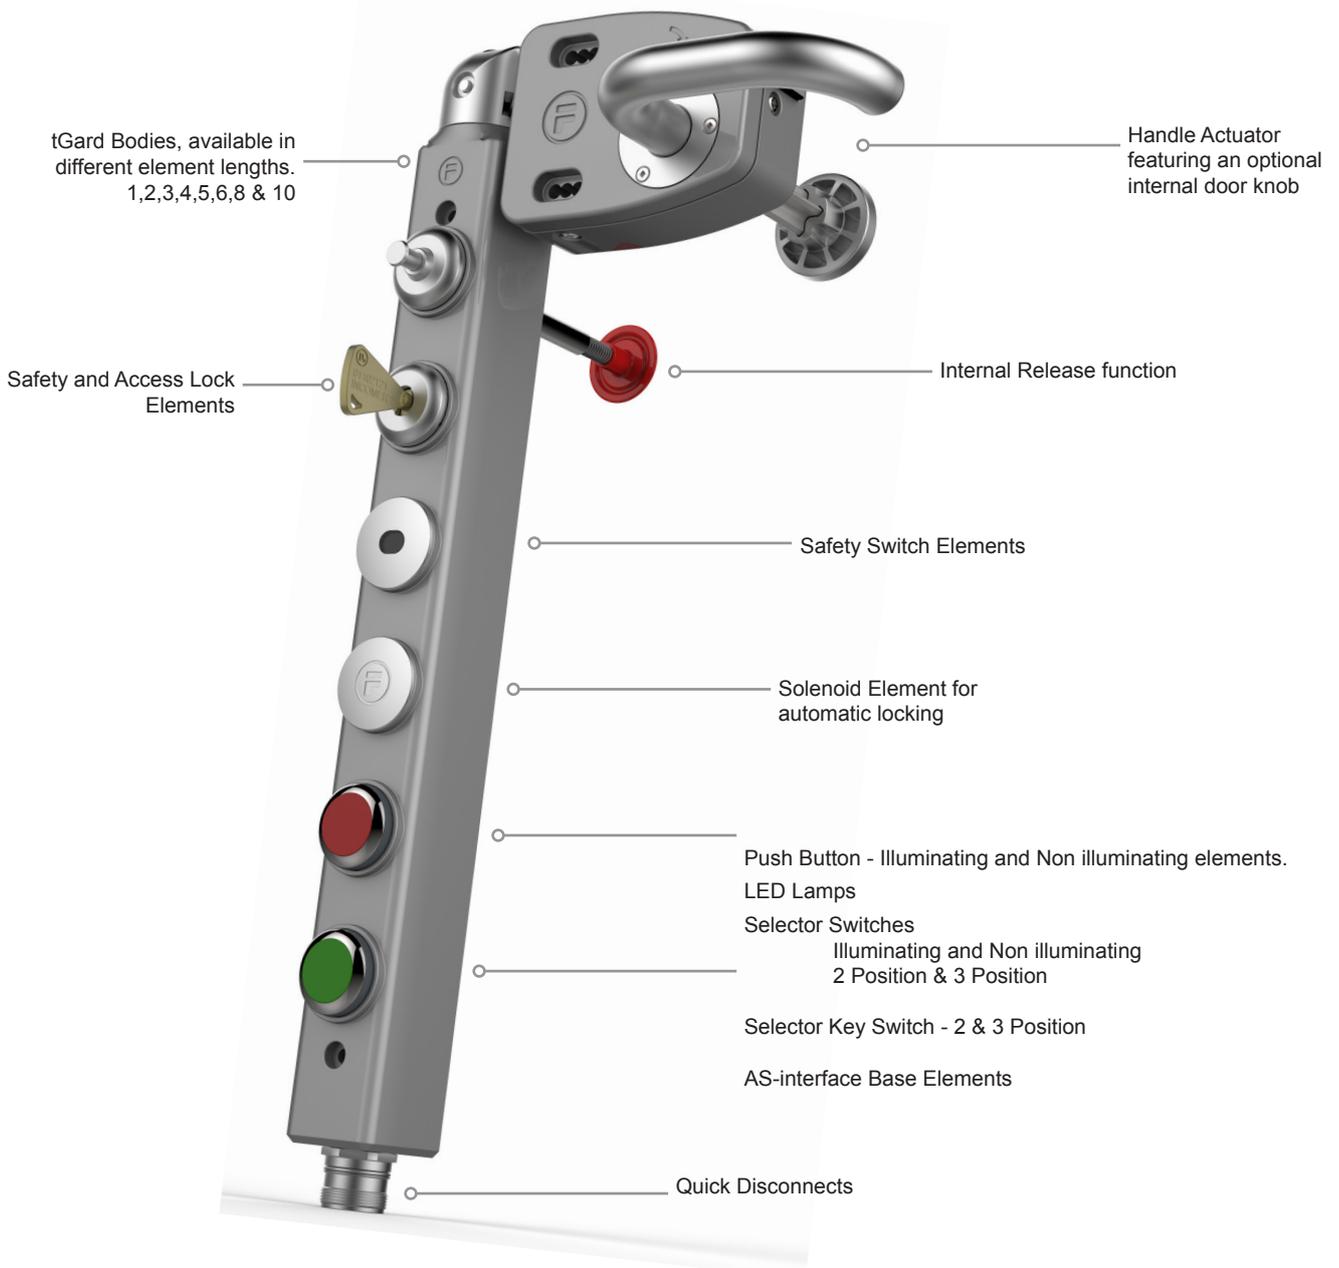

tGard is the new innovative approach to controlling access to hazardous machinery and equipment. It is a compact metal bodied system that enables the configuration of various safety products including electrical safety gate switches (with or without guard locking), mechanical trapped key interlocks, and electrical operator controls, either as separate devices or integrated into one device.

tGard offers “a customised safety solution, as standard” and is defined by a range of **tGard** elements, including selector switches, safety switches (solenoid and non solenoid), personnel keys, emergency release, push buttons, estops, indicator lamps and a choice of operating handles for both hinged and sliding guard doors. These elements are simply selected and then assembled into a robust housing, suitable for mounting onto machine guarding, providing the user with an exact configuration specific to the application.

tGard is quick and easy to install and can be mounted directly onto a flat surface, doors or extruded aluminium profiles without the need for mounting plates or brackets. It is IP65 as standard and has been designed to be fully compliant with the new machinery safety standards.

Customised Safety Solutions as Standard

- Simply Robust
- Customisable
- Future proof for future element expansion
- Easy to Install
- Quick Disconnects as standard
- Standards compliant
- Safety Gate Switches
- Trapped Key Interlocks
- Operator Control

Gard

An Innovative new Platform for Machine Safety

“Customised Safety Solutions as Standard”

- Simply Robust
- Customisable
- Standards compliant
- Future proof for future element expansion
- Easy to Install
- Quick Disconnects as standard
- Trailing Cables as standard

Configurable solutions include:

- Safety Gate Switches
- Trapped Key Interlocks
- Operator Control
